

2025~2026学年10月广东广州黄埔区广州市第二中学科学城校区高二上学期月考英语试卷

一、单项选择

1. It is essential that these application forms _____ back as early as possible.
- A. are sent B. be sent C. will be sent D. must be send
2. The conflict _____ between the two nations over resources drew international concern.
- A. broke out B. was broken out C. which broke out D. broken out
3. Make sure that _____ for the accident learns a good lesson.
- A. whoever to be blamed B. no matter who is to blame
- C. anyone who is to blame D. those who are to be blamed
4. After months of exhausting overtime, several key employees _____ a severe flu, _____ a delay to the entire project.
- A. came down with; resulting in B. came up with; resulted in
- C. came out of; resulting in D. came down to; resulted in
5. People often develop a strong sense of belonging in a community _____ they feel completely _____.
- A. when; with ease B. where; at ease C. to which; at ease D. so; with ease
6. They have made _____ a rule not to smoke in the room, but _____ was beyond their expectation was that many people don't obey it.
- A. it; what B. that; what C. it; that D. that; why
7. It was his refusal to cooperate with the investigation _____ led to _____ of involvement in the case.
- A. which; him being suspected B. that; his being suspected
- C. which; he was suspected D. that; his suspected
8. Since _____ in 2024, the electric vehicle model, _____ over 100,000 units, _____ a symbol of green transportation.
- A. launching; sold; becoming B. having launched; sold; has become
- C. being launched; has sold; becoming D. launched; sold; has become

9. Mrs Jones is annoyed that the sweeping machine she _____ at the official service center is out of order again.
A. had it repaired B. was repairing C. repaired D. had repaired
10. Years of teaching experience as a volunteer has made him _____ timely encouragement along with careful instructions _____ challenges into opportunities for growth.
A. convinced that; transforms B. convinced of; transform
C. convincing that; transforming D. convincing of; transforms

二、阅读理解

11. High School Science Exploration Challenge

We are thrilled to announce the first-ever Exploration Challenge for high school students on campus. This challenge calls on you to dive into interesting scientific topics and present your thoughts creatively.

What You Can Do

Choose any science topic that interests you and present what you've learned through one of the following project types:

- Experiment and Report: Conduct a simple experiment and write about your findings.
- Poster or Digital Presentation: Create an informative poster or a digital presentation on science.
- Video or animation (动画片) : Produce a video or animation to explain a scientific phenomenon you enjoy.
- Essay or Blog Posts: Write an essay or a series of blog posts with the theme of "Science and Me."

How to Enter

Submit your projects to our e-mail address science@challenge.com. Please keep in mind your projects are sent as attachments in the e-mail before Aug. 31st.

Judging and Prizes

Projects will be judged on creativity, accuracy, and engagement. Prizes include scholarships, science kits, and opportunities to visit a university science lab. The winners' projects will be displayed in our school science magazine.

Award Ceremony

The award ceremony will be broadcast live on our official account, featuring a demonstration of the top 10 entries along with the stories behind them. It will then be followed by an award presentation and dinner for all.

For detailed rules and more information about the challenge, please subscribe to our official account. We can't wait to see your creations!

(1) What may be a possible project for the challenge?

- A. A book on physics. B. A report on law study.

C. A poster about music.

D. A video on plant growth.

(2) Which of the following is a reward for winners?

A. Dining with a scientist.

B. Receiving a gold medal.

C. Having their projects published.

D. Making their family stories known.

(3) What is the purpose of the challenge?

A. To attract magazine subscribers.

B. To conduct scientific field research.

C. To encourage science exploration.

D. To improve digital presentation skills.

12. What's the purpose of your study? It's the question many basic-science researchers fear. And it's the question that Carly Anne York received 10 years ago from a volunteer. At that time, York was a PhD student studying squid (鱿鱼). When asked why money should be spent on what the volunteer called "silly science", York could only respond by stressing the essential value of knowledge.

Today, York, an animal physiologist, still doesn't know how her doctoral research can directly benefit humankind. But after a decade of studying how animals interact with their environments, York has come to realize that the focus on immediate applications is not the goal of basic science. Rather, it seeks to achieve profound comprehension of the world around us. That doesn't mean the research is worthless. As York details in her new book, *The Salmon Cannon and the Levitating Frog*, projects that could be considered silly or useless can lead to scientific advances that better our lives.

"More than half of all economic growth comes from innovations that began in the world of basic discovery," York writes. So was, for example, the "salmon cannon (鲑鱼大炮)". It was once a tube system used to transport apples gently down from trees — until it was repurposed to help salmon bypass hydroelectric dams and return to their freshwater breeding grounds. Other, more seemingly sensible methods had been attempted to help the salmon, but they were either ineffective or too labor intensive. The cannon's tubes, which provide an air-powered ride over the dam, were the perfect, if unconventional, solution.

Skillfully using her wisdom, York reminds us in her book that it's nearly impossible for a science project to follow a direct path that results in an immediately applicable outcome. This book is a timely reminder especially when the U.S. government cuts science funding today. "I am also appreciative of the scientists who built the path to advance basic research," York writes. "I hope that after reading this book you will be as well."

14. What can we infer from the question in the first paragraph?

A. The value of York's work was doubted.

B. Much money was wasted on York's study.

C. Researchers feared the failure of their work.

D. Most research work lacked specific purposes.

15. What is the goal of basic science according to York?

- A. To have immediate applications. B. To create life-changing inventions.
C. To further understand natural events. D. To build human-nature relationship.

16. What would York probably suggest about basic-science research?

- A. Promoting the positive outcome. B. Shortening the research process.
C. Improving the practical application. D. Recognizing the long-term value.

17. Where is the passage most probably taken from?

- A. A biography of a famous animal physiologist.
B. A news report on a recent scientific discovery.
C. A book review defending the value of basic science.
D. The introduction chapter of a research paper on salmon.

13. Have you ever wanted to share the taste of a delicious dish with a friend far away, only to find that words and pictures fall short of delivering the full experience? A new device called “e-Taste” can help. Developed by scientists at Ohio State University in the US, this device aims to improve digital experiences by adding “flavors” to them, reported Science Daily.

Creating digital tastes is challenging. Taste is about “feeling” actual molecules (分子) that come out when teeth and saliva (唾液) break down food or drink, according to the US National Institutes of Health (NIH). The molecules “wake up” certain cells on the tongue and along the roof and back of the mouth. With different sensitivity, these cells respond to at least one of the five basic tastes — sweet, sour, salty, bitter and umami (鲜味) by sending signals to the thalamus (丘脑). It then transmits the signals to other brain regions where specific tastes are identified.

Since the full flavor is experienced only when these signals are put together, creating taste requires collecting all this information. The “e-Taste” device does this using a special sensor. Like an “electronic tongue”, the sensor measures the levels of five chemicals in food or drink that contribute to the five basic tastes. Once gathered, the data is sent wirelessly to another part of the device. This part pushes up liquids through a gel layer that contains the five chemicals. By drinking the liquids, people can taste the food or drink no matter where they are.

Real-world tests of “e-Taste” went well. It worked even when the device’s two parts were placed in different cities thousands of kilometers apart. Volunteers identified foods like fish soup with almost 87 percent success, according to a statement by The Ohio State University.

Looking ahead, scientists plan to “conquer” more taste sensations, like spiciness. They also want to study the device’s effect on different people, given that taste is “greatly related to human emotion and memory”, said scientist Li Jinghua in the university’s statement.

18. What is the main purpose of the “e-Taste” device?

- A. To create new flavors in dishes. B. To identify different tastes of dishes.
C. To describe tastes beyond words. D. To realize remote sharing of flavors.

19. What is the main focus of paragraph 2?

- A. How the human body experiences tastes.
- B. The challenges of developing digital tastes.
- C. The role of different parts of the mouth in tasting.
- D. How the five basic tastes interact with each other.

20. What does the underlined word “this” in paragraph 3 refer to?

- A. Gathering necessary data.
- B. Sending electrical signals.
- C. Experiencing the full flavor.
- D. Measuring the levels of tastes.

21. What can be inferred about the future plans of the scientists?

- A. Lowering its cost is their primary goal.
- B. Spiciness is their top research priority.
- C. They aim to stimulate a wider range of tastes.
- D. They will study the emotional impact of the device.

14. Researchers from the Technical University of Munich (TUM) and the University of Cologne (UC) in Germany have developed an AI-based learning system.

The idea is simple yet effective: a webcam (网络摄像头) tracks students' eye movements. Maike Schindler, a math professor from the UC, and her team have designed hundreds of math tasks involving basic math skills. Depending on the task, specific patterns appear, which are shown digitally on a heat map, with red indicating areas where the children look frequently and green showing the areas where they look only briefly. Confident students quickly get to key problem areas, while struggling ones often look aimlessly.

“Tracking eye movements helps recognize different learning strategies through patterns and finally create detailed support reports for teachers,” says Maike Schindler. “The AI system sorts the patterns. On the basis, the software selects tailored learning videos and exercises for the pupil,” says robotics professor Achim Lilienthal from the TUM.

To develop the new eye-tracking technology, Professor Lilienthal has drawn on his robotics research experience. In that work, he used eye trackers with a small human-like robot named Nao. It enables better communication with humans. However, these advanced systems with high accuracy cost many thousands of euros.

To find a better solution for schools, the researchers cleverly mix technical experience with math knowledge. Instead of using high-end eye-trackers, their AI-driven approach uses regular webcams and makes up for low accuracy through AI improvements. “By focusing on problem areas, the AI adapts the eye-tracking with the webcam, achieving accuracy comparable to high-end tools,” professor Lilienthal says.

Germany's Wulfen Comprehensive School is the first to introduce the system. A math test there showed that about one-third of the new students struggled with basic math. With the AI system, one teacher can now support five students at once — a significant improvement over traditional one-on-one teaching. "As education faces teacher shortages and increasing pressure to deal with individual learning styles, our system for promoting basic math skills is simply excellent support for schools," says Schindler.

22. What is the function of the heat map?

- A. Testing students' math skills.
- B. Presenting students' focus areas.
- C. Measuring the difficulty of math tasks.
- D. Tracking the eye movements of students.

23. Which best describes the AI-driven eye-tracking technology?

- A. Helpful but slow.
- B. Simple and relaxing.
- C. Creative but costly.
- D. Affordable and effective.

24. What does Wulfen Comprehensive School get from the system?

- A. Reduction in teacher training.
- B. Adaptation to learning needs.
- C. Inspiration for advanced math.
- D. Improvement in school management.

25. Which of the following is the best title for the text?

- A. Heat Maps: A New Tool for Classroom Management
- B. Robot Nao: A Breakthrough in Educational Robotics
- C. Webcam Eye Tracker: An AI Tool for Personalized Learning
- D. Basic Math Skills: A Growing Challenge for German Schools

15. One of the most significant developments throughout history is the speed of information sharing. Never has it been so easy to learn about what's happening in the world, and while sending it to our circles of friends and family who'll share it with their circles of friends and family, in less than five minutes, we've all read the same article, viewed the same post or watched the same video. _____ 26 _____

However, I find there's a bad side to every good thing. Due to the amount of information that's shared, sometimes, negative news outweighs positive ones. _____ 27 _____ Consequently, the moment you open your phone, you're met with news about conflict, disease or economic instability. Unavoidably, this will affect the way your brain processes information and ultimately your mental health.

You may feel more worried when a friend says to you, "There's nothing wrong with my life. _____ 28 _____" Possibly it's because most of the conversations around you and the content you're consuming center around what someone is doing wrong, or what you shouldn't be doing with your life. It's impossible to feel good about yourself when you're constantly reminded of what's going wrong.

How lucky I am that I can choose to simply put my phone away when I don't want to be reminded about a disease happening in a community! _____ 29 _____ It's always essential to find the balance between staying informed and not letting the overconsumption of information affect our mental health.

_____ 30 _____ If this information is mostly negative, we'll suffer because of it. So make sure that you stay informed from proper news sources, but it's also okay to choose to put your phone away and watch a comedy show instead.

- A. It must be dealt with in time.
- B. Personally, I find this to be remarkable.
- C. However, I don't know why I feel anxious.
- D. It's with a certain sense of shame that I share this.
- E. We must take care of ourselves to the extent that we can.
- F. Everyone is angry and scared and they're sharing these emotions online.
- G. We live such fast-paced lives, with our brains constantly receiving information.

三、完形填空

16. A few months ago, Chris Junior Anaeke found the gutters (排水沟) in the local market choked with plastic bags, soda bottles and food containers. The young man helped clear up the _____. But recently, the gutters were _____ to witness again.

That's why Anaeke, 28, wants to _____ his own waste management company. After _____ a detailed plan, he's now trying to get it off the ground. "I have noticed that sanitation (卫生) is nobody's business — even authorities don't look at it _____," said Anaeke, adding pollution is indeed a _____ issue in his city. A study found high levels of heavy metal substances in the local water systems.

Meanwhile, he has also tried _____ government officials and investors for funding, but without any _____. "Little attention has been paid to the _____," he says. "But I will keep _____."

On World Environment Day, June 5, he organized his first cleanup event in his city. About 50 volunteers took part and also marched to raise the public's _____. The event has been well _____, which motivated him to regularly arrange cleanups at some public sites.

Anaeke acknowledges this isn't going to _____ the local sanitation problem completely. But that's not the _____. "I want to make the people around me _____ to their environment, especially the children and younger ones," he says. "As the saying goes, 'Catch them young.'"

31.

- A. tension
- B. mess
- C. doubt
- D. difference

32.

- A. untypical
- B. unlikely
- C. unnecessary
- D. unbearable

33.

- A. expand B. relocate C. establish D. close

34.

- A. calling off B. setting aside C. drawing up D. passing over

35.

- A. continually B. seriously C. casually D. objectively

36.

- A. major B. familiar C. minor D. personal

37.

- A. catching up with B. standing up for C. looking down upon D. reaching out to

38.

- A. delay B. hesitation C. trouble D. luck

39.

- A. news B. failure C. mistake D. challenge

40.

- A. searching B. pushing C. practising D. complaining

41.

- A. confidence B. tolerance C. awareness D. dependence

42.

- A. received B. guaranteed C. predicted D. prepared

43.

- A. identify B. evaluate C. address D. generate

44.

- A. point B. reason C. trend D. approach

45.

- A. relevant B. sensitive C. resistant D. accessible

四、语法填空

17. 语法填空

On May 8, 2025, Huawei unveiled its first HarmonyOS-powered computer in Shenzhen, marking a historic milestone in China's journey toward 46 (technology) self-reliance. This innovation, 47 (develop) by over 10,000 engineers and 20 research institutes over five years, challenges the global dominance of operating systems like Windows and macOS.

The HarmonyOS PC runs on HarmonyOS 5, _____ 48 _____ completely self-developed operating system. It emphasizes speed, security, and seamless connectivity across devices. For example, its AI _____ 49 _____ (assist) "Xiaoyi" simplifies tasks like creating presentations and summarizing meetings through voice commands. The system also supports cross-device collaboration (跨设备协作), _____ 50 _____ (allow) users to control multiple Huawei devices effortlessly.

Safety is another key focus. The HarmonyOS PC uses a self-developed kernel and chip-level encryption (芯片级加密) to protect data. It also includes a "super privacy mode" _____ 51 _____ disables cameras and microphones with a physical button.

_____ 52 _____ (build) a sustainable ecosystem, Huawei is collaborating with universities to train developers and has adapted over 300 apps for the HarmonyOS PC. With 7.2 million registered developers and 110 million lines of code, HarmonyOS has made _____ 53 _____ possible to create a robust environment for future innovations.

_____ 54 _____ challenges remain — such as competing with established systems — the HarmonyOS PC represents China's shift from relying on foreign technology _____ 55 _____ leading in core innovations. As Huawei's CEO stated, "HarmonyOS is not just an operating system; it's the foundation for smart living."

五、单词拼写

18. The encouraging feedback from the audience has greatly b _____ the singer's confidence in her performance. (根据首字母单词拼写)
19. To truly understand a culture, you must explore it in d _____, not just visiting sites but participating in traditions and sharing stories with locals. (根据首字母单词拼写)
20. A n _____ and balanced diet is fundamental to maintaining our energy and overall health. (根据首字母单词拼写)
21. Effective leaders are defined by their calm and decisive actions in the face of multiple c _____. (根据首字母单词拼写)
22. The technician had a f _____ look as the system crashed again just minutes after he fixed it. (根据首字母单词拼写)
23. With unwavering courage, the young lawyer d _____ the innocent man against the false charges. (根据首字母单词拼写)
24. The sudden i _____ of the phone call broke his concentration while he was doing his homework. (根据首字母单词拼写)
25. The successful launch and positive user feedback are p _____ that our team's innovative approach was correct. (根据首字母单词拼写)

26. We i _____ planned to finish the experiment in a week; however, unexpected equipment failure occurred, forcing us to pause. (根据首字母单词拼写)
27. The final match was so _____ (very great and involving a high level of emotion, tension, or concentration) that everyone was on the edge of their seats. (根据英文提示单词拼写)
28. Our English teacher called on us to read more English novels with the intention of _____ (to become larger in size or amount) our vocabulary. (根据英文提示单词拼写)
29. 67. _____ (to completely change something or someone, especially in a way that improves it) by the inspiring success of her peers, she approached her own research with renewed passion. (根据英文提示单词拼写)
30. The two reports on the same event gave _____ (opposite or inconsistent) conclusions, which made the public confused. (根据英文提示单词拼写)
31. The research team, _____ (to consist of sth/sb) of experts from five countries, published its groundbreaking findings. (根据英文提示单词拼写)
32. Despite conservation efforts, the population of the species keeps _____ (to become less or go down to a lower level) at an alarming rate. (根据英文提示单词拼写)

六、完成句子

33. 这个致力于克服每一个技术挑战的团队，最终取得了一项重大突破。
The team, _____ every technical challenge, finally achieved a major breakthrough.
34. 我们必须彻底解决这个长期存在的问题，避免它再次影响项目进度。
We have to solve this long-standing problem _____ to prevent it from affecting the project progress again.
35. 积极的反馈能建立自信，而这反过来会激励个人接受更大的挑战。
Positive feedback builds confidence, _____ motivates individuals to take on greater challenges.
36. 他被派去主管这个部门。
He was placed _____ the department.

37. 该理论是基于物理定律在宇宙中恒定不变这一假设而建立的。

The theory was formulated _____ basic physical laws remain constant across the universe.

38. 有很多流媒体服务可供电影爱好者订阅，每个平台都提供独特的内容。

There are numerous streaming services for movie lovers _____, each offering unique content.

39. 多亏了准确的统计数据，卫生官员才能有效追踪疾病的传播。

_____, health officials can track the spread of diseases effectively.

40. 据估计，到2025年，超过70%的企业将把人工智能整合到运营中。

_____ over 70% of businesses will integrate artificial intelligence into their operations by 2025.

41. 研究证实，全球气温上升与人类活动产生的碳排放增加有直接关系。

Research confirms that the rising global temperature _____ increased carbon emissions from human activities.

42. 纸的发明可以追溯到如此早的时期，这真是令人惊叹。

It is amazing that the invention of paper can _____ such an early period.

七、短文填空

43. 段落填空

Ada found a strong stick and tore a shirt into strips. _____ 81 _____, she was ready to put her first aid knowledge into practice. As it was her first time providing emergency care, _____ 82 _____. Having managed to compose herself, Ada comforted Roy _____ 83 _____ to make sure it was well supported. Then cautiously and gently, she _____ 84 _____, adjusting the stick to avoid putting too much pressure on it. Not until the treatment was completed _____ 85 _____.

八、书信写作

44. 假定你是李华。在为期一周的学农活动中，你所在小组的课题“Observing the Interaction between Insects and Crops (观察昆虫与作物的互动关系)”获得了指导老师的表扬。请在英语课的课前展示环节，代表你的小组做一次分享，内容包括：

1.项目的实施过程【如：选地，分工，观察记录昆虫的种类、数量，发现昆虫对作物的影响(蜜蜂授粉、瓢虫吃蚜虫等)】；

2.你的收获和体会

可能用到的词汇：ladybug瓢虫；earthworm蚯蚓；mantis螳螂；pollinate授粉；caterpillar毛毛虫；aphid蚜虫；grasshopper蚱蜢

注意：

- 1.词数约120-150;
 - 2.可以适当增加细节，以使行文连贯
-
